

Which would you choose for Grandma? (if she's at risk for developing low oxygen saturation)

Grandma on ventilator

Grandma on SentiO Oxy[™]

SentiO Oxy[™] Mask is a game-changer and can protect millions and save hundreds of thousands of lives in the World at such incredibly favorable economics that many countries cannot afford NOT to adopt it nationwide as soon as possible.

SentiO Oxy[™] Super-Oxygenating Mask System requiring only Low-Flow Oxygen

1. Proprietary controller manifold gets the most out of available oxygen.
2. Virtually no entrainment, no waste, and no rebreathing.
3. Essential and invaluable for developing nations with oxygen scarcity.
4. Ideal for COVID patients with significant low-O₂ saturation (SpO₂ of $\leq 95\%$ on room air).
5. Enables early treatment upon diagnosis, *before* further multi-organ damage from silent hypoxia (low tissue oxygen) can occur.
6. May preserve and protect cardiopulmonary and cerebrovascular systems.
7. Suitable for home or hospital (including ICU) use. Relieves hospital/ICU overcrowding.
8. Provides higher quality of life and a greater margin of safety for any patient with hypoxia from severe cardiopulmonary diseases (congestive heart failure, pulmonary fibrosis, etc.).
9. Patient breathes comfortably and spontaneously, free from barotrauma from forced ventilation by a ventilator.
10. Treat at home for a small fraction of the cost of hospitalization and may avert the complications and high cost of ventilator therapy later.
11. Compatible with all medical sources of oxygen (tank, hospital wall outlet, or oxygen concentrator).
12. Easy to put on and take off to eat, drink, go to the bathroom, or shower with minimal interference in activities of daily living.
13. The **SentiO Oxy[™] Mask** is designed to treat all situations of hypoxia, so its usefulness extends beyond pandemic protection to many areas of chronic care.

Multiple analyses, including the following, account for this conclusion:

[1] Latest report from 'Anesthesiology News' (May 2021) involving 9,512 hospitalized patients show that in spite of advanced modalities of treatment (HFNC, ventilator, etc.,) about 50% of patients still die.

[2] The above dismal statistics is due to the fact COVID patients have a 2-week period of silent severe hypoxia during which insidious organ damage to brain, heart lungs, kidney and liver occurs. By the time they present to the hospital seeking care, their fate had already largely been sealed by the extensive COVID-induced injury. About 1/3 of those who "recover" suffer severe long-term health loss and debilitation (chronic COVID syndrome, or "long haul" COVID") the cost of which for the U.S. is estimated to be 8.5 trillion. This is a cost no nation—not even the U.S.—can afford.

[3] Prevention of multi-organ damage via high oxygenation must begin early in the course of COVID infection but previously the only devices capable of high oxygenation require expensive equipment and high flow oxygen that can only be obtained at major hospital centers.

[4] With the newly available, FDA-approved **SentriO Oxy™ Mask**, patients can breathe comfortably on their own and be treated either (a) in the hospital or (b) at home on low-flow oxygen from an oxygen generator that creates an endless amount of oxygen from ambient air. The attainable high oxygen concentration (80%) deep in the lungs via **SentriO Oxy™ Mask** is comparable to that from an expensive ventilator, but without the high cost (intravenous sedatives, muscle paralytics, ICU care) and added physical damage to the lungs caused by forced ventilation.

[5] For all nations, the best 2-prong strategy for dealing with COVID is (a) mass vaccination for those not yet infected and (b) **SentriO Oxy™ Mask** to protect those currently infected. The high margin of oxygen safety not only saves lives and avert complications, it protects the health of citizens so that they can help rebuild and contribute to the national economy instead of becoming a burden to society by becoming cardiopulmonary cripples. Every dollar spent on **SentriO Oxy™ Mask** now will save thousands, if not tens of thousands of dollars in future rehabilitation costs. Therefore, investing in a national strategic reserve of **SentriO Oxy™ Mask** and oxygen generators is the wisest, most effective and economical approach to ending the devastation from COVID and lift the declining economy.
